

Assignment 2: Cell Referencing & Essential Formulas

SUBMISSION GUIDELINES

- Save your Excel workbook as: Assignment2_YourName.xlsx
- Capture full-screen screenshots of each completed task (formulas, results, charts).
- Create one folder named Excel_YourName and put the workbook and all screenshots inside.
- Compress the folder into a .zip file (Excel_YourName.zip).
- Upload the .zip file on the submission portal.

Zip File Must Contain

- Completed Excel workbook (Assignment2_YourName.xlsx)
- Screenshots of each formula and its result

⚠ Screenshots are mandatory with every submission!

Do NOT upload separate files.

Do NOT submit without compressing into a .zip file.

Covers: Excel Essential (Shortcuts, Ribbon), Working with Data (Cell Referencing), and Essential Formulas (SUM, AVERAGE, MIN/MAX, COUNT family, SUMIF/SUMIFS, AVERAGEIF/AVERAGEIFS).

Objective: Master cell referencing and Excel's essential aggregation and conditional functions using the Sales dataset.

Resource: Use the provided Excel_Practice_Dataset.xlsx file (Products, Sales, and Employees sheets) as the base data. It is shared along with this assignment.

What You Need To Do

Task 1: Cell Referencing (Relative, Absolute, Mixed)

1. On the Sales sheet, put a "Discount %" value (e.g., 0.05) in one cell and reference it with an ABSOLUTE reference ($\$B\1) to calculate a Discount Amount for every order.
2. Add a "Net Amount" column = Total Sales – Discount Amount, using relative references copied down.

Task 2: Basic Aggregation

3. Calculate the Total Sales of all orders using SUM.
4. Calculate the Average order value using AVERAGE.
5. Find the Highest and Lowest Total Sales using MAX and MIN.

Task 3: Counting Functions

6. Count the total number of orders using COUNT and COUNTA.
7. Count how many orders came from the "North" region using COUNTIF.
8. Count orders from "North" with Units greater than 10 using COUNTIFS.

Task 4: Conditional Sums & Averages

9. Calculate total sales for each Region using SUMIF (one per region).
10. Calculate total sales for "Electronics" in "West" using SUMIFS.
11. Calculate average Units for "Accessories" using AVERAGEIF, and average Total Sales for "Electronics" in "East" using AVERAGEIFS.

Tip: Use keyboard shortcuts (Ctrl+C/V, Ctrl+Arrow, Alt+=) while working, and label each result next to its formula.
